

CLAIMS

1. A shelf base (6) for a refrigerator comprising a plate (9) and lower retaining rails (12) extending along a lower side of the plate (9) for attachment for a support (13) for holding chilled goods, characterised in that upper retaining rails (11) for another support (13, 31) extend along the upper side of the plate (9).
2. The shelf base according to claim 1, characterised in that the retaining rails (11, 12) are arranged one above the other.
3. The shelf base according to claim 1 or claim 2, characterised in that the retaining rails (11, 12) are arranged in the direction of the holder of the shelf base (6) in retaining means used for the refrigerator.
4. The shelf base according to claim 1, characterised in that the upper retaining rails (11) are connected at least at one of their ends to respectively one end of one of the lower retaining rails (12).
5. The shelf base according to claim 1, characterised in that front ends of respectively one of the upper (11) and one of the lower (12) retaining rails are connected by a guide profile (10) which spans the front edge of the plate (9) and is displaceable along the front edge.
6. The shelf base according to claim 4, characterised in that the clips (10) interconnect all the upper and lower retaining rails (11, 12).
7. The shelf base according to any one of the preceding claims, characterised in that rear ends of respectively one of the upper and one of the lower retaining rails (11, 12) span the rear edge of the plate (9) and are displaceably connected along the rear edge.

8. The shelf base according to any one of the preceding claims, characterised in that the lower and/or the upper retaining rails (11, 12) are open at their rear ends.
9. The shelf base according to claim 7, characterised in that an upwardly projecting projection (20) is formed at the front end of a bearing surface of at least one lower rail (12).
10. The shelf base according to any one of the preceding claims, characterised in that a shell (36) or a bottle holder (15) is mounted in the lower retaining rails (12) as a support.
11. The shelf base according to any one of the preceding claims, characterised in that a support (13) for drinks cans (14) is mounted in the upper retaining rails (11).
12. The shelf base according to claim 10, characterised in that the support for drinks cans (14) comprises a base plate (23) parallel to the plate (9) and ribs (24) provided with indentations, which project from the base plate (23).
13. The shelf base according to any one of claims 1 to 9, characterised in that an egg holder (31) is mounted in the upper or lower retaining rails (11, 12).
14. The shelf base according to claim 12, characterised in that the egg holder (31) comprises a perforated base plate (23), side flanks (34) bent away from the base plate (23) and webs (35) which project from the side flanks (34) and engage in the retaining rails (11, 12).
